

CRM

Install & Update Guide

Eternalgy CRM · Version 1.0.3 · August 2026

A short guide for everyone using CRM. You install it **once**. After that it keeps itself up to date — with nothing for you to click.

It installs like a normal Windows program — there is no website to log into and no link to remember. Unlike some of our other apps, **there is no setup step** — it connects automatically the moment it opens.

PART 1

Part 1 — Installing

Set aside about 5 minutes. You need a Windows PC (Windows 10 or 11) and an internet connection — the app has no offline mode. There is nothing to install beforehand, and nothing to ask anyone for first.

Step 1 — Download the app

Go to the [CRM Portal download page](#).

- 1 Scroll down to the **Assets** list.
- 2 Click the file starting `CRM-Setup` and ending in `.exe` to download it. Always take the newest version the page offers.
- 3 It will go to your **Downloads** folder unless you choose somewhere else.

Step 2 — Run the installer

- 1 Open the file you just downloaded.
- 2 **If Windows shows a blue “Windows protected your PC” box:** click **More info**, then **Run anyway**. This is normal — Windows shows it for any app it has not seen before.
- 3 Click **Next** through the screens. Tick **Create a desktop shortcut** if you would like one.
- 4 Click **Install**.

When it finishes you will have an **Eternalgy CRM** shortcut on your desktop and in the Start Menu.

Step 3 — Open it

Start Menu → **Eternalgy CRM** (or the desktop shortcut).

The first time you open it, the window may stay blank for a few seconds while it starts up. This is normal and only happens on the first launch. You are then asked to **sign in** — pick your name and enter your password. There is no setup box; the app is already connected.

You sign in once, and stay signed in

Signing in is the first thing you do — nothing is visible until you do. It records who made each change. You stay signed in after closing and reopening the app, until you click  **Sign out** at the top right. If your name isn't listed, ask whoever manages Staff Accounts to add you.

PART 2

Part 2 — Updating

There is no update button. The app checks for new versions by itself in the background, downloads quietly if one is found, and installs it automatically the next time you close and reopen the app.

Things worth knowing

Nothing of yours is lost. All case data lives in the shared cloud database, not on your PC, so an update never touches it.

You never download the installer again. Steps 1–3 above are one time only.

You won't see a progress bar or a prompt. The whole process is silent — close the app, and next time you open it you're on the new version.

To check your version: Settings → Apps → Eternalgy CRM. The app itself does not show a version number on screen.

TROUBLESHOOTING

If something goes wrong

WHAT YOU SEE	WHAT TO DO
Blue “Windows protected your PC” screen	Normal. Click More info → Run anyway
Window is blank for a few seconds	Normal on first launch. If still blank after 10s, close it completely and reopen
“保存失败 / Save failed ” message	Serious — the change did not save. Check your internet and try again
“ Postgres 同步失败 / sync failed ” message	Your change was saved. A background copy failed — no need to redo anything, just tell Nurul
Sign-in won't accept your name/password	Your account may not exist yet, or the password changed. Ask whoever manages Staff Accounts
App will not start at all	Restart your PC, then try again
Anything else	Contact Nurul. Say what you were doing and what you saw

Please report problems rather than working around them.

The two message types above look similar but mean very different things — worth reading carefully rather than clicking past them.

Nurul — for anything about the app: problems, questions, or suggestions for what would make it easier to use.

This is version 1.0.3. Nothing is stored on your PC — all case data lives in the shared cloud database, so there is nothing to back up and nothing lost if your PC is replaced. To uninstall: Settings → Apps → Eternalgy CRM → Uninstall.
